Subject: Research for an unpaid internship as a Web and Mobile Web Developer

Amiens, le 17/07/2021

Dear Mr Stroobandt,

I have been studying 'Web and mobile web Development' at the AFPA center in Amiens, France since February 2021.

In order to obtain my diploma, I have to carry out an unpaid internship for a period of 3 months from 02/11/2021 to 04/02/2022.

Throughout this training I have learned to use various software (Laragon, VisualStudio) and web programming languages (html, css, bootstrap 4, php) and database management tools (phpMyAdmin).

During our first meeting, you told me that the previous languages would probably not be useful for the app you are currently developing. But even if it's not part of my training, working on mobile app development is what I would like to do once I finish my training program. That's why I would be glad to start studying new languages or software before November in order to be more efficient by then.

I would really appreciate to work for a company that promote and deploy renewable energies.

Sincerely,

Vincent De SINETY
